

Ladies and Gentlemen:

Please do not impair my ability to receive the content I want from XM Radio. As a satellite radio subscriber, I will benefit from the ability to hear local, in-depth traffic and weather reports whenever I want. This is a service my local broadcasters do not provide. Even if the service were provided locally, I should have the right to purchase this premium content on a commercial-free basis, just as I purchase HBO. XM Radio is delivering the content listeners want and are willing to pay for. Do not punish XM Radio and its listeners because XM Radio has been innovative enough to "build a better mousetrap."
